Nicholas Kingston

682-895-0059 | ngrifk@gmail.com | LinkedIn | GitHub

Full-Stack Software Engineer with 5+ years of experience building consumer-facing, scalable web applications, with strong front-end expertise in React 18, modern JavaScript (ES6+), and TypeScript. Experienced building performant UI components, integrating with RESTful and GraphQL APIs, and developing Node.js-based orchestration layers, with an eye for WCAG/ADA-compliant, detail-oriented UX. Proven track record leveraging AI developer tools (GitHub Copilot, Amazon Q Developer) to accelerate development and improve code quality, including building LLM-integrated (RAG) application experiences. Skilled in Agile delivery, automated testing, and collaborative code review.

Very interested in pursuing DevOps/SRE role

TECHNICAL SKILLS

Frontend	JavaScript, TypeScript, React 18, Angular (v6–16), Vue.js, Node.js, HTML5, CSS3, Bootstrap 4, Responsive Design, WCAG/ADA Accessibility
Backend / API	Java, Python, FastAPI, Spring Boot Microservices, .NET (familiarity), RESTful API Design, GraphQL, Apache Kafka, PySpark/Apache Spark, Hibernate, OAuth/Token-Based Auth
Databases	Azure SQL, PostgreSQL, Microsoft SQL Server, MongoDB, DynamoDB, Stored Procedures, Views
Cloud & DevOps	Azure, AWS (EC2, Lambda, S3, VPC, SQS, RDS, Aurora), Docker, Kubernetes/AKS, Terraform, CI/CD (Jenkins, Azure DevOps, GitLab Duo)
AI & Tools	GitHub Copilot, Amazon Q Developer, Microsoft Copilot, RAG (Retrieval-Augmented Generation), LLM Application Development, LangChain, IntelliJ IDEA, VS Code, Postman, JUnit, Mockito, SonarQube, Veracode
Process	SAFe Agile Scrum, Kanban, SDLC, Security/Privacy/Compliance Standards, Code Review, Sprint Planning

PROFESSIONAL EXPERIENCE

Forward Deployed Engineer | **Revature** | Remote *May 2026 – Aug 2026*

- Completed Revature's paid Forward Deployed Engineer program focused on federal AI modernization, full-stack development, and cloud-native engineering; ranked #1 on the FDE Gauntlet technical assessment and interviewed for placement with Karsun Solutions (U.S. DoE contractor).
- Co-built a GenAI-powered FOIA Response Pipeline (pair project) using Python, Spring Boot, AWS Bedrock, LangChain, PostgreSQL, and MongoDB; implemented Retrieval-Augmented Generation (RAG) architecture with LangSmith tracing to produce LLM workflows for AI-enabled federal document processing.
- Completed a full-stack accelerator sprint (Spring Boot 3, React, PostgreSQL), independently diagnosing and fixing seeded CORS misconfiguration and DTO response-leak bugs; containerized services with Docker Compose.

Associate Software Engineer | **Southwest Airlines** | Dallas, TX *Jan 2025 – February 2026*

- Built and enhanced full-stack web applications for Ground Technology Operations, including the Boarding Data Collection (BDC) Manager platform (React 18 + Java/Spring Boot), delivering responsive, accessible UI/UX across internal and operational workflows.
- Integrated front-end React applications with RESTful APIs and event-driven backend services using Apache Kafka for denied boarding compensation workflows — consuming and producing events across distributed microservices with AWS Lambda and stored procedure logic.
- Implemented WCAG/ADA accessibility compliance (AudioEye) for Web UI — color contrast, keyboard navigation, and font sizing — ensuring production-ready, compliant interfaces for both external-facing and internal platforms.
- Deployed GenAI-assisted development workflows using Amazon Q Developer and Microsoft Copilot, reducing development cycles by ~20–30% across multiple application feature enhancements.
- Resolved critical backend defects involving failed SQL writes and stored procedure failures, restoring stable data flow in production; led environment certificate refresh validations and environment-level service restarts.

- Supported CI/CD pipelines (Jenkins / GitLab Duo) for automated build, testing, and deployment; remediated cybersecurity vulnerabilities on Linux servers and led CyberArk Agent upgrades following SDLC/security standards.
- Collaborated with cross-functional partners (product managers, architects, QA, and operations teams) in SAFe Agile sprint ceremonies including planning, stand-ups, reviews, and retrospectives.
- Led alert de-duplication improvements for JBA (Jet Bridge Audio) Dash monitoring using AWS Lambda, SNS, and Datadog — tuned severity levels and reset periods, monitored real-user and system metrics dashboards, and validated incident-creation logic to reduce noisy/duplicate alerts across ground operations systems.

Software Engineer Intern | **Southwest Airlines** | Dallas, TX *May 2024 – Aug 2024*

- Selected for Southwest Airlines' College Hire Intern Program (CHIP); contributed to the Native In-App Games project team focused on increasing customer engagement within Southwest's mobile application.
- Supported requirements documentation, testing coordination, and UI experimentation, partnering with engineers to analyze application behavior in lower environments within an Agile framework.

Full Stack Developer | **Perficient** | Remote / San Francisco, CA *Feb 2023 – Feb 2024*

- Architected and deployed a high-volume ETL pipeline using AWS Step Functions Express, processing 100,000+ records every 20–30 minutes into a data lake for a Fortune 500 client; integrated downstream Snowflake data warehousing reporting.
- Developed full-stack features across Python, JavaScript, HTML/CSS, Bootstrap, and database programming through client-facing project work; delivered REST API design, session management, database modeling, and automated testing.
- Participated in pair-programming, code reviews, and iterative Agile delivery cycles aligned with enterprise SDLC and engineering practices.

Mobile & Full Stack Developer | **SBS Systems LLC** | McLean, VA *Oct 2020 – Dec 2022*

- Designed and launched the company's first Android application with multitenancy support, role-based navigation, and business provider login portal integration.
- Built and consumed RESTful APIs across multiple client projects, implementing OAuth-style authentication flows, session management, and data validation logic using Java and Spring Boot.
- Developed full-stack features using Java, Apache Kafka, Angular, Vue.js, and Bootstrap; managed cloud infrastructure via AWS EC2 and serverless compute.
- Built a Python + Apache Spark data ingestion pipeline for location-based weather analytics, enabling real-time data mining on large-scale datasets.

OTHER PROJECTS

VAMCC Member Portal PWA | React 18, Spring Boot, PostgreSQL, AWS

- Built a Progressive Web App member portal with conversational registration chatbot, duplicate member detection, and role-based access control — full-stack React 18 / Spring Boot / PostgreSQL / AWS architecture.

SBS Weather Analytics App | Python, Apache Spark, Android, JavaScript, MySQL, AWS EC2

- Full-stack Android weather application delivering real-time forecasts via WeatherBit API; Python + Apache Spark backend pipeline for large-scale weather data ingestion and processing; deployed on AWS EC2.

EDUCATION & TRAINING

AWS Generative AI and AI Agents with Amazon Bedrock - Coursera/AWS (in progress)

Certified Kubernetes Application Developer (CKAD) Prep - Linux/Pearson (in progress)

M.S., Information Systems — University of Texas at Arlington, *December 2024* | *Magna Cum Laude*

Data Engineering Certificate Course - Purdue University/SimpliLearn, December 2022

B.S., Business Information Systems — University of Texas at Arlington, May 2022

ADDITIONAL INFORMATION

U.S. Citizen | Eligible for Security Clearance | Available Immediately | Open to Relocation for suitable roles
